AUTHOR INDEX

Adamovich, S. V., Burlachkova, N. I. and **Fel'dman, A. G.**: Wave nature of the central process of formation of the trajectories of change in the joint angle in man **1,** 130

Adamovich, S. V. and **Fel'dman, A. G.**: Model of the central regulation of the parameters of motor trajectories **2,** 338

Airapetyan, S. N. *See* **Suleimanyan, M. A., Sagiyan, A. A.** and **Airapetyan, S. N.** **5,** 898

Akhrem, A. A. *See* **Lando, D. Yu., Ivanova, M. A.** and **Akhrem, A. A.** **5,** 828

Akimov, V. N. and **Kim, V. M.**: Thermodynamic potentials, stress tensor and surface tension of unmixed electrolyte layers in an electric field **6,** 1056

Akimov, V. N., Kim, V. M. and **Pyatnitskii, A. M.**: Fluctuations of the electrical characteristics of the membrane in "stress" states **3,** 470

Akimov, V. N., Kim, V. M. and **Pyatnitskii, A.M.** General scheme for calculating the fluctuations in currenr and voltage of the membrane in stable and metastable states **1,** 75

Akopyan, A. R., Il'in, V. I. and **Chemeris, N. K.**: Modulation with dopamine of the Ca component of the action potential of the soma of the neurones of the mollusc *L. stagnalis* **2,** 314

Aksentsev, S. L. *See* **Milyutin, A. A., Belyayeva, Ye. I., Bulanova, K. Ya., Kirilyuk, A. P., Lyskova, T. I., Okun', I. M., Aksentsev, S. L., Konev, S. V.** and **Kol'tover, V. K.** **4,** 701

Alekberli, E. K. and **Topaly, V. P.**: Permeability of bilayer lipid membranes for amphotericin *B* **2,** 357

Aleksandrov, V. A. and **Kutikova, L. A.**: Fluctuations in natural electromagnetic fields and rhythm of diurnal vertical migrations of zooplankton **6,** 1116

Aliyevskaya, L. L. *See* **Bukatina, A. Ye., Son'kin, B. Ya.** and **Aliyevskaya, L. L.** **2,** 309

Andreyeva, O. V., Bagryantseva, Ye. A., Bizunok, S. N., Popov, V. G. and **Spentitskii, Ye. N.**: Effect of the dynamics of dehydration on the characteristics of the bacterial cells *E. coli* **3,** 490

Andryushchenko, A. P. *See* **Kozlov, A. V., Marzoyev, A. I., Andryushchenko, A. P., Vladimirov, Yu. A.** and **Azizova, O. A.** **5,** 880

Anisimov, A. V. *See* **Yeverestov, A. S., Anisimov, A. V.** and **Samuilova, I. F.** **1,** 92

Anisimov, A. V. and **Ionenko, I. F.**: Diagnosis of the resistance of plant cells at low temperatures by the pulsed nuclear magnetic resonance method **4,** 729

Anosov, A. K. *See* **Murina, M. A., Anosov, A. K.** and **Roshchupkin, D. I.** **1,** 97

Antonenko, Yu. N. *See* **Tsybul'skaya, M. V., Antonenko, Yu. N., Tropsha, A. E.** and **Yaguzhinskii, L. S.** **5,** 875

Antonenko, Yu. N. and **Yaguzhinskii, L. S.**: Model of non-electrogenic transport of cations across bilayer lipid membranes **2,** 255

Arnotskaya, N. Ye. *See* **Gevorkyan, B. Z., Arnotskaya, N. Ye.** and **Fedorova, Ye. N.** **6,** 1140

Artemova, L. G. *See* **Miminoshvili, A. A., Artemova, L. G., Rykova, V. A., Shulyakovskaya, T. S.** and **Tabagua, M. I.** **3,** 524

Arutyunyan, S. G. *See* **Aslanyan, V. M.** and **Arutyunyan, S. G.** **1,** 160

Arutyunyan, S. G. *See* **Aslanyan, V. M., Arutyunyan, S. G.** and **Babayan, Yu. S.** **4,** 615

Arutyunyan, S. G. *See* **Aslanyan, V. M., Babayan, Yu. S.** and **Arutyunyan, S. G.** **3,** 410

Arutyunyan, S. G. *See* **Babayan, Yu. S., Vardevanyan, P. O., Garibyan, Dzh. V., Arutyunyan, S. G., Kulaga, L. L.** and **Aslanyan, V. M.** 2, 346

SUBJECT INDEX

Absorption lines, study of the form of the gamma resonance - of blood oxyhaemoglobin in leukaemia 2, 342

Absorption spectra, measurements of the fourth, eighth and twelfth derivatives of the - of the reaction centres and chromatophores of *Rhodospirillum rubrum* 6, 1045

Absorption spectrum, thermal motion of macromolecules and the Mössbauer - 1, 32

Acid, substrate depression in the tricarboxylic - cycle 6, 1039

Acids, change in the electrical conductivity of concentrated salt-free solutions in connexion with the formation of a complex of polyriboadenylic and polyribouridylic - 4, 610

G-Actin, calorimetric study of the denaturing of - 4, 636

Action, biophysical aspects of the - of physical and chemical factors on living organisms protective properties of anti-oxidants 4, 776

Action, mechanism of - of *o*-phenanthroline on photo-induced electron transport in purple bacteria 4, 650

Action of irradiation, system of regulating lipid oxidation and the structural state of the nuclear membrane after the - on tumour bearing animals 1, 53

Action of isoenzymes, physicochemical aspects of the manifestation of the - 3, 408

Action potential, modulation with dopamine of the Ca component of the - of the soma of the neurones of the mollusc *L. stagnalis* 2, 314

Action potentials, role of the structural rearrangements of the lipids of the excitable membranes in the generation of - by higher plants on moderate cooling 3, 454

Activation of the chemiluminescence of the liposomes on peroxidation of the lipids by Tb^{3+} ions 3, 432

Activation, rheological model of muscle tissue in a state of constant - 1, 146

Activation, study of the oxygen isotope composition of arctic drift ice in connexion with - of the growth of phytoplankton at the boundary of the melting ice 5, 912

Activation energy of enzymatic hydrolysis of various α-chymotrypsin substrates 5, 810

Activity, dependence of the - of the work of the sodium pump on the osmotic pressure of the medium 5, 898

Activity, effect of physical-chemical factors on the - of anion-sensitive ATPases 1, 87

Activity, influence of a pulsed magnetic field on the electrical - of crayfish nerve cells 4, 747

Activity, influence of light and electrical current on pulses of periodic - in the unicellular flagellate alga 5, 919

Activity of the reaction centres of photosynthesizing bacteria *Rhodopseudomonas viridis* on heating and change in pH 1, 1

Activity, possibility of evaluating the functional - of human erythrocytes by the ^{31}P n.m.r. method 6, 1100

Acyl galactosyl sphyngosine, influence of cholesterol on the hydration of - 1, 162

Adenine, infrared and electron vibratory spectra of - and its derivatives in an argon matrix 4, 602

Adenylates, mitochondrial carrier of - regulates the production of ATP in the physiological range of respiratory rates 3, 497

Adrenoreceptors, facilitation of adrenergic synaptic transmission. Possible role of the presynaptic - 3, 515
Adsorption, effect of the polarizability of the charged groups of biological and artificial membranes of the specific - of monovalent cations 4, 689
Adsorption of phloretin and phlorezin, measurement of potential jumps on - on the surface of lipid membranes by the intramembrane field compensation method 3, 464
Aero-ions, modelling the regional deposition of - is the human lungs 5, 965
Ageing, structural functional changes in synaptic brain membranes on - 4, 701
Agglutination of microbes, study of - in suspension by a spectro-turbidimetric method 5, 935
β-Alanine, conformation and thermal stability of DNA in aqueous solutions of - and γ-aminobutyric acid 4, 615
α-Alanine, mechanism of the influence of glycine, - and γ-aminobutyric acid on the heat stability of DNA 1, 160
Alcohol dehydrogenase reaction, macroscopic fluctuations in the - 5, 823
Alga, influence of light and electrical current on pulses of periodic activity in the unicellular flagellate - 5, 919
Alga, periodic electrical activity in a unicellular flagellate - and its possible link with kinophotokinesis 4, 704
Algae *Dunaliella parva*, hydrostatic pressures in the cells and elastic modulus of the plasmalemma in the halophilic - 5, 903
"Allosteric label" method, study of the structure of haemoglobin by the - 1, 38
Amino acid, establishing the optimal correspondence between - (or nucleotide) sequences 6, 999
Amino acid residues, possibility of determining the structural organization of bacterial and animal rhodopsins from the hydrophobicity of the - 3, 421
γ-Aminobutyric acid, conformation and thermal stability of DNA in aqueous solutions of β-alanine and - 4, 615
γ-Aminobutyric acid, mechanism of the influence of glycine, α-alanine and - on the heat stability of DNA 1, 160
Amphotericin *B*, permeability of bilayer lipid membranes for - 2, 357
Analysis of growth pulsations of hydroid polyps, *Obella longissima* 6, 1104
Analysis of the form of the induction curve of luminescence of chlorophyll in chloroplasts in the presence of electron transport inhibitors 5, 846
Analysis of the kinetic isotope effects in H_2O–D_2O mixtures on enzymatic catalysis: detection of conformational dynamic processes 2, 200
Analysis of the regulation of secretion of noradrenaline by the auto-adrenoreceptors and the frequency of stimulation 5, 979
8-Auilino-1-naphthalene sulphonate, relationship between the electrokinetic potential and the fluorescence of - in a depleted and non-depleted culture of *E. coli* 6, 1091
Animal liver tissues, electron paramagnetic resonance spectra with $g=2{\cdot}03$ of - on exposure to butylhydroxytoluene and diethylnitrosamine 3, 524
Animal rhodopsins, possibility of determining the structural organization of bacterial and — from the hydrophobicity of the amino acid residues 3, 421
Animal tissues, effect of ionol on oxygenase content of proliferating - 5, 948
Anion-sensitive ATPases, effect of physical-chemical factors on the activity of - 1, 87
Anionic channels of plasma membrane of the photoreceptor cell 2, 260
Anisotropy, determination of the thermal expansion coefficient of pepsin crystals. - of the conformation dynamics of the enzyme globule 3, 543

Antioxidants, biophysical aspe cts of the action of physical and chemical factors on living organisms protective properties of - 4, 776
Arctic drift ice, study of the oxygen isotope composition of - in connexion with activation of the growth of phytoplankton at the boundary of the melting ice 5, 912
Argon matrix, infrared and electron vibratory spectra of adenine and its derivatives in an - 4, 602
Artificial membranes, effect of the polarizability of the charged groups of biological and - on the specific adsorption of monovalent cations 4, 689
ATP, ionic channels formed in bilayer lipid membranes by large subunits of Na, K-ATPase and activated by - and *p*-nitrophenyl phosphate 4, 756
ATP, mitochondrial carrier of adenylates regulates the production of - in the physiological range of respiratory rates 3, 497
ATPase activity, effect of respiration substrates on the - of the uncoupled mitochondria 2, 366
ATPase subunits, role of individual - of *E. coli* in hydrogen-potassium exchange 2, 280
ATPase, effect of physical-chemical factors on the activity of anion-sensitive - 1, 87
ATP synthesis, influence of external factors on - with abrupt rise in pH in the mitochondria 2, 365
ATP-synthetase, effect of visible light on the - function of mitochondria 4, 698
ATP-synthetase structural transition, heat induced - , a factor regulating energy coupling in chloroplasts 2, 377
Auto-adrenoreceptors, analysis of the regulation of secretion of noradrenaline by the - and the frequency of stimulation 5, 979

Bacteria, mechanism of action of *o*-phenanthroline on photo-induced electron transport in purple - 4, 650
Bacteria, reversibility of inhibition by phenanthroline of electron transport in the chromatophores of the non-sulphur purple - on exposure to ubiquinone and alpha-tocopherol 3, 548
Bacterial cancer of plants, kinetics of change in the content of free radicals in - 2, 329
Bacterial cells *E. coli*, effect of the dynamics of dehydration on the characteristics of the - 3, 490
Bacterial reaction centres, rates of energy transfer between pigments at the - 1, 171
Bacterial rhodopsins, possibility of determining the structural organization of animal and - from the hydrophobicity of the amino acid residues 3, 421
Bacteriophage T4 ghosts, calorimetric studies of - 2, 237
Bacteriorhodopsin, criteria for the incorporation of - into a bilayer lipid membrane 2, 270
Bacteriorhodopsin, fluorescing state of - and its participation in primary photoprocesses in purple membranes at −196°C 6, 1082
Bacteriorhodopsin, kinetics of the origin of the photo-induced potential differences in a model system containing - 3, 427
Bacteriorhodopsin proteoliposomes, study of the incorporation of - into bilayer lipid membranes. Experimental 2, 275
Barley seedlings, value of the photosynthetic units of photosystems I and II in - as a function of the intensity and spectral composition of the light 2, 319
Bihelical DNA, theory of packing of - : globular state of uniform elastic macromolecule in a cavity of small volume 2, 221
Bilayer lipid membranes, change in the electrical and visco-elastic properties of - on interaction with proteins and lipoproteins 3, 459

Bilayer lipid membrane, criteria for the incorporation of bacteriorhodopsin into a - 2, 270
Bilayer lipid membranes, effect of constant magnetic field on the electrical capacitance of - 4, 667
Bilayer lipid membranes, effect of glycerol on the capacitance and conductivity of - 2, 245
Bilayer lipid membranes, electro-osmotic processes in region of contact of - 2, 241
Bilayer lipid membranes, electrostriction of - 4, 673
Bilayer lipid membranes, formation and properties of - of ceramide aminoethyl phosphonate 1, 167
Bilayer lipid membranes, influence of ozone on the permeability of flat - 2, 359
Bilayer lipid membranes, ionic channels formed in - by large subunits of Na, K-ATPase and activated by ATP and *p*-nitrophenyl phosphate 4, 756
Bilayer lipid membranes, model of non-electrogenic transport of cations across - 2, 255
Bilayer lipid membranes, permeability of - for amphotericin *B* 2, 357
Bilayer lipid membranes, problem of the polaron mechanism of the backgrounds conductivity of - 1, 72
Bilayer lipid membranes, specific electrical resistance of the narrow gap between two - 5, 865
Bilayer lipid membranes, study of the incorporation of bacteriorhodopsin proteoliposomes into - . Experimental 2, 275
Biochemical reaction, kinetic resonance in the open - catalyzed by an enzyme in forms with different activity 4, 626
Biological membranes, effect of the polarizability of the charged groups of artificial and - on the specific adsorption of monovalent cations 4, 689
Biological membranes, impregnated filters as model of - 4, 684
Biological specimens, nature of the signal ($g \simeq 3{\cdot}0$) appearing on cooling - in a magnetic field 6, 1073
Biomechanical aspects of the wiping reflex cycle 3, 530
Biophysical aspects of the action of physical and chemical factors on living organisms protective properties of anti-oxidants 4, 776
Biopolymers, fluorafur interactions with - 2, 226
Biopolymer, hydrate surroundings of the macromolecules of - as shown by u.h.f. dielectrometry 6, 1019
Bivalent cations, influence of - on the temperature of the phase transitions in lipid membranes 1, 66
Bivalent iron ions, thyroid hormones and the content of - in the rabbit liver 5, 880
Blood cells, luminescent parameters of the nucleated - during the immune response of the body 2, 304
Blood oxyhaemoglobin, study of the form of the gamma resonance absorption lines of - in leukaemia 2, 342
Blood plasma, a fluorescent probe—a cholesterol analogue: its localization in the lipoproteins of the - and in model lipid particles 6, 1078
Body, luminescent parameters of the nucleated blood cells during the immune response of the - 2, 304
Bone tissue, study of the structure of — using the polarized spectra of combination scatter 6, 1140
Bovine crystalline lens, comparative study of the proteins of the - in native tissue and in an extract by X-ray diffraction 6, 1123
Brain membranes, structural functional changes in synaptic - on ageing 4, 701
Butylhydroxytoluene, electron paramagnetic resonance spectra with $g=2{\cdot}03$ of animal liver tissues on exposure to - and diethylnitrosamine 3, 524

Calf thymus histone H1, effect of ionic strength of medium on the structure and aggregation of - 4, 645
Calorimetric investigation of the structural organization of ovomucoid molecules 2, 211
Chlorimetric studies of bacteriophage T4 ghosts 2, 237
Calorimetric study of the denaturing of G-acting 4, 636
Cancer of plants, kinetics of change in the content of free radicals in bacterial - 2, 329
Capillaries, mathematical model of the transport of a liquid in the convoluted proximal renal tubule and the surrounding - 4, 741
Carbon isotopes, dynamic model of the fractionation of - in the living cell 6, 1108
Carcinogenesis, electrical charge of the surface of lymphocytes and their capacity for mitotic division in induced - 1, 102
Carcinogenesis, free radicals and oxidative phosphorylation in chemical - 4, 750
Cardiac fibres, study of the electromechanical coupling in - by an optical method 5, 968
Cations, effect of the polarizability of the charged groups of biological and artificial membranes on the specific adsorption of monovalent - 4, 689
Cations, model of non-electrogenic transport of - across bilayer lipid membranes 2, 255
Cell, dynamic model of the fractionation of carbon isotopes in the living - 6, 1108
Cell culture, study of the iron-sulphur centres of the respiration chain of the mitochondria at different stages of growth of a - of the hamster *Cricetulus griceus* 4, 604
Cell membranes, possible influence of the surface of ideally polarized metals on ion transport in the - 4, 754
Cell membranes, link between the K^+-dependent swelling of the cells and the state of the - 4, 752
Cell surface RNA—a possible molecular adaptogen receptor 5, 889
Cells, elastic properties of plant - 4, 733
Cells, hydrostatic pressures in the - and elastic modulus of the plasmalemma in the halophilic algae *Dunaliella parva* 5, 903
Cells, influence of a pulsed magnetic field on the electrical activity of crayfish nerve - 4, 747
Cells, magnetic susceptibility and magnetic "capture" of - 5, 922
Cells, obtaining the spectral characteristics of dividing - as illustrated by halophilic micro-organisms 6, 1088
Cells, potassium conductivity of plasma membrane of frog photoreceptor - 5, 859
Cells, two states of dissociated - of the freshwater sponge *Ephydatia fluviatilis* 2, 386
Central regulation, model of the - of the parameters of motor trajectories 2, 338
Ceramide aminoethyl phosphonate, formation and properties of bilayer lipid membranes of - 1, 167
Cerebrone, evaluation of the thermodynamic parameters on phasic conversions of - 4, 657
Chemiluminescence, activation of the - of the liposomes on peroxidation of the lipids by Tb^{3+} ions 3, 432
Chitosan, effect of - on the electrophoretic mobility of thymocytes 2, 300
Chlorophyll, analysis of the form of the induction curve of luminescence of - in chloroplasts in the presence of electron transport inhibitors 5, 846
Chlorophyll, effect of - on the polymorphic phase equilibrium of egg phosphatidyl choline 2, 368
Chlorophyll photosensitized luminescence of singlet oxygen in polystyrene films. Kinetics of decay after a laser flash 6, 1003
Chloroplast membranes, use of rhodamine 6G as fluorescent probe for investigating - 6, 1069
Chloroplasts, analysis of the form of the induction curve of luminescence of of chlorophyll in - in the presence of electron transport inhibitors 5, 846
Chloroplasts, heat induced ATP-synthetase structural transition, a factor regulating energy coupling in - 2, 377

Chloroplasts, localization of α-tocopherol in - 2, 363
Cholesterol, influence of - on the hydration of acyl galatosyl sphyngosine 1, 162
Cholesterol, model of the interaction of lipids and - in the hydrated phases: formation of linear cholesterol multimers 5, 856
Cholesterol analogue, a fluorescent probe—a -: its localization in the lipoproteins of the blood plasma and in model lipid particles 6, 1078
Chromatin, spectral studies of - and its components in the vacuum ultraviolet region of the spectrum 6, 1047
Chromatophores, measurement of the fourth, eighth and twelfth derivatives of the absorption spectra of the reaction centres and - of *Rhodospirillum rubrum* 6, 1045
Chromatophores, reversibility of inhibition by phenanthroline of electron transport in the - of the non-sulphur purple bacteria on exposure to ubiquinone and alpha-tocopherol 3, 548
Chromatophores, study of the kinetics of deactivation of excited states in the antenna of the - of *Rhodospirillum rubrum* by picosecond differential spectrophotometry 3, 436
α-Chymotrypsin substrates, activation energy of enzymatic hydrolysis of various - 5, 810
Clusters in the liquid crystalline lipid bilayer 3, 449
Collagen, mechanism of piezoelectrical polarization of - 2, 232
Collagen, partial restoration of the ordered structure in intact - after thermal denaturing 6, 1034
Collagen, phase transition in native - in the presence of salts 1, 48
Collagen, use of synchrotron radiation for the X-ray study of the dynamics of structural changes of - on dehydration 2, 350
Collagen type, connection of muscle cells is a protein of the - 2, 348
Collapse and intramolecular phase layering in a polymer in which each unit may be in two states 4, 621
Complex proteins, applicability of thermodynamic analysis of the thermal denaturing of - on the basis of the van t'Hoff equation 1, 44
Concanavaline *A*, effect of - on the intracellular pH of thymocytes 3, 550
Conductivity, change in the electrical - of concentrated salt-free solutions in connexion with the formation of a complex of polyriboadenylic and polyribouridylic acids 4, 610
Conductivity, effect of glycerol on the capacitance and - of bilayer lipid membranes 2, 245
Conductivity, potassium - of plasma membrane of frog photoreceptor cells 5, 859
Conductivity, problem of the polaron mechanism of the background - of bilayer lipid membranes 1, 72
Conformation and thermal stability of DNA in aqueous solutions of β-alanine and γ-aminobutyric acid 4, 615
Conformation and thermal stability of DNA in aqueous urea solutions 3, 410
Conformation, non-monotonic character of the temperature changes in the - of proteins in the pre-denaturing region of temperatures 4, 640
Conformation dynamics, determination of the thermal expansion coefficient of pepsin crystals. Anisotropy of the - of the enzyme globule 3, 543
Conformational changes, kinetic model of the functioning of alcohol dehydrogenase with reference to the - in protein 5, 820
Conformational dynamic processes, analysis of the kinetic isotope effects in H_2O–D_2O mixures on enzymatic ca talysis: detection of - 2, 200
Connectin of muscle cells is a protein of the collagen type 2, 348
Contractile activity, wave regimes of the - of strands of the plasmodium of the myxomycetes *Physarum* and their link with transfer of protoplasm 1, 106

Contractile system, interaction of vanadate with the - of the rabbit psoas muscle in the active, relaxed and rigor states 2, 309
Contrast dissipative structures, conditions for the existence of - 3, 509
Conversions, evaluation of the thermodynamic parameters on phasic - of cerebrone 4, 657
Conversions, structural - and aggregation stability of lecithin liposomes in media with cryoprotectors 2, 284
Crayfish nerve cells, influence of a pulsed magnetic field on the electrical activity of - 4, 747
Cricetulus griceus, study of the iron-sulphur centres of the respiratory chain of the mitochondria at different stages of growth of a cell culture of the hamster - 4, 694
Cryoprotectors, structural conversions and aggregation stability of lecithin liposomes in media with - 2, 284
Crystalline lens, comparative study of the proteins of the bovine - in native tissue and in an extract by X-ray diffraction 6, 1123
Crystalline lens, X-ray diffraction on the intact isolated frog - 5, 953
Crystalline lipid bilayer, clusters in the liquid - 3, 449
Crystallization, study of low temperature - in *E. coli* cells by the n.m.r. method 2, 295
Crystals, special aspects of the melting of - of whale metmyoglobin 1, 165
Culture of *Tetrahymena*, role of oxytaxis in the origin of dissipative structures in a - 4, 710
Cultures, changes in redox potential in transitional processes in pure and mixed - of *Escherichia coli* and *Serratia marcescens* 2, 325
Current of the membrane, general scheme for calculating the fluctuations in voltage and - in stable and metastable states 1, 75
Cytochrome P450, reaction of - by free methylviologen radicals 3, 539

Deactivation, study of the kinetics of - of excited states in the antenna of the chromatophores of *Rhodospirillum rubrum* by picosecond differential spectrophotometry 3, 436
Dehydration, effect of the dynamics of - on the characteristics of the bacterial cells *E. coli* 3, 490
Dehydration, influence of - on the interdomain interaction in immunoglobulin G and its fragments 4, 631
Dehydration, use of synchrotron radiation for the X-ray study of the dynamics of structural changes of collagen on - 2, 350
Dehydrogenase, kinetic model of the functioning of alcohol - with reference to the conformational changes in protein 5, 820
Dehydrogenase reaction, macroscopic fluctuations in the alcohol - 5, 823
Denaturing, partial restoration of the ordered structure in intact collagen after thermal - 6, 1034
Denaturing of G-actin, calorimetric study of the - 4, 636
Denervated rabbit muscles, spectroscopic study of myosin of - 2, 361
Dichroism, investigation of the temperature dependence of the spectra of circular - of 5-substituted 2′-deoxyuridines 5, 793
Dielectrophoresis of aqueous inclusions in b.l.m. as a possible mechanism of the initial stage of electrical breakdown 2, 249
Diethylnitrosamine, electron paramagnetic resonance spectra with $g=2{\cdot}03$ of animal liver tissues on exposure to butylhydroxytoluene and - 3, 524
Dinitrophenol, effect of - on the rate of resynthesis of lipids in mitochondrial membranes 3, 546
Dipalmitoyl phosphatidylcholine liposomes, study of the localization of the quinone ring of ubiquinone Q-10 in - by the triplet probe method 5, 851

Dissipative structures, role of oxytaxis in the origin of - in a culture of *Tetrahymena* 4, 710
Dissipative structures, study of the stability of contrast - 4, 715
Distributed code, possibility of the - recording of signals in non-equilibrium cooperative systems (Structural reflexia) 1, 125
DNA, causes of the change in hydration on protonation of - 2, 217
DNA, conformation and thermal stability of - in aqueous solutions of β-alanine and γ-aminobutyric acid 4, 615
DNA, conformation and thermal stability of - in aqueous urea solutions 3, 410
DNA, influence of the size of ligand molecules on the stability of the double helix of - 5, 828
DNA, mechanism of the influence of glycine, α-alanine and γ-aminobutyric acid on the heat stability of - 1, 160
DNA, study of the conformation dependent hydration isotherms of - 3, 415
DNA, use of the fusion method to detect differences between - of normal and tumour tissue 2, 346
DNA blocks, determination of the nucleotide content of - from measurement of the areas under the melting curve 3, 536
Dunaliella parva, hydrostatic pressures in the cells and elastic modulus of the plasmalemmna in the halophilic algae - 5, 903
Dynamics of oxygen transport in erythrocytes 3, 484
Dynamics of the redox potential in an *E. coli* culture in a regime of periodic cultivation 5, 908

Ecological example, linear analysis of the stability of systems with diffusion as illustrated by an - 1, 140
Effect of chitosan on the electrophoretic mobility of thymocytes 2, 300
Effect of chlorophyll on the polymorphic phase equilibrium of egg phosphatidyl choline 2, 368
Effect of concanavaline *A* on the intracellular pH of thymocytes 3, 550
Effect of constant magnetic field on the electrical capacitance of bilayer lipid membranes 4, 667
Effect of dinitrophenol on the rate of resynthesis of lipids in mitochondrial membranes 3, 546
Effect of glycerol on the capacitance and conductivity of bilayer lipid membranes 2, 245
Effect of ionic strength of medium on the structure and aggregation of calf thymus histone H1 4, 645
Effect of ionol on oxygenase content of proliferating animal tissues 5, 948
Effect of low intensity continuous millimetre radiation on the transport of Na^+ ions in the frog skin 3, 527
Effect of phosphodiesterase inhibitors on the membrane potential and respiration of the mitochondria 1, 173
Effect of physical-chemical factors on the activity of anion-sensitive ATPases 1, 87
Effect of respiration substrates on the ATPase activity of the uncoupled mitochondria 2, 366
Effect of the dynamics of dehydration on the characteristics of the bacterial cells *E. coli* 3, 490
Effect of the external electrical field on Ca^{2+} transport in the sarcoplasmic reticulum 3, 480
Effect of the polarizability of the charged groups of biological and artificial membranes on the specific adsorption of monovalent cations 4, 689
Effect of visible light on the ATP-synthetase function of mitochondria 4, 698

Egg phosphatidy lcholine, effect of chlorophyll on the polymorphic phase equilibrium of - 2, 368
Electrical activity, influence of a pulsed magnetic field on the - of crayfish nerve cells 4, 747
Electrical activity, influence of a series of pulses of a magnetic field of low amplitude on the - of mollusc neurones 2, 355
Electrical activity, influence of a single pulse of a magnetic field on the - of mollusc neurones 1, 116
Electrical activity, periodic - in a unicellular flagellate alga and its possible link with klinophotokinesis 4, 704
Electrical breakdown, dielectrophoresis of aqueous inclusions in b.l.m. as a possible mechanism of the initial stage of - 2, 249
Electrical capacitance, effect of constant magnetic field on the - of bilayer lipid membranes 4, 667
Electrical characteristics, fluctuations of the - of the membrane in "stress" states 3, 470
Electrical charge of the surface of lymphocytes and their capacity for mitotic division in induced carcinogenesis 1, 102
Electrical conductivity, change in the - of concentrated salt-free solutions in connexion with the formation of a complex of polyriboadenylic and polyribouridylic acids 4, 610
Electrical current, influence of light and - on pulses of periodic activity in the unicellular flagellate alga 5, 919
Electrical field, effect of the external - on Ca^{2+} transport in the sarcoplasmic reticulum 3, 480
Electric field, thermodynamic potentials, stress tensor and surface tension of unmixed electrolyte layers in an - 6, 1056
Electrical properties, change in the visco-elastic and the - of bilayer lipid membranes on interaction with proteins and lipoproteins 3, 459
Electrical resistance, specific - of the narrow gap between two bilayer lipid membranes 5, 865
Electrokinetic potential, relationship between the - and the fluorescence of 8-anilino-1-naphthalene sulphonate in a depleted and non-depleted culture of *E. coli* 6, 1091
Electrolyte layers, thermodynamic potentials stress tensor and surface tension of unmixed - in an electric field 6, 1056
Electromagnetic fields, fluctuations in natural - and rhythm of diurnal vertical migrations of zooplankton 6, 1116
Electromechanical coupling, study of the - in cardiac fibres by an optical method 5, 968
Electron microscopy investigation of the structure of aqueous gelatine gels by the method of negative contrasting 2, 372
Electron paramagnetic resonance spectra, with $g=2{\cdot}03$ of animal liver tissues on exposure to butylhydroxytoluene and diethylnitrosamine 3, 524
Electron transfer, steady characteristics of - at the photosynthetic reaction centres 1, 8
Electron transfer, theory of low temperature processes of - 4, 596
Electron transport, mechanism of action of *o*-phenanthroline on photo-induced - in purple bacteria 4, 650
Electron transport, reversibility of inhibition by phenanthroline of - in the chromatophores on the non-sulphur purple bacteria on exposure to ubiquinone and alpha-tocopherol 3, 548
Electron-transport chain, change in the stoichiometry of proton-electron coupling in the photosynthetic - 5, 841

Electron transport inhibitors, analysis of the form of the induction curve of luminescence of chlorophyll in chloroplasts in the presence of - 5, 846
Electron vibratory spectra, infrared and - of adenine and its derivatives in an argon matrix 4, 602
Electro-osmotic processes in region of contact of bilayer lipid membranes 2, 241
Electrophoretic mobility, effect of chitosan on the - of thymocytes 2, 300
Electrophoretic mobility, interpretation of the mechanism of changes in the - on exposure to physical fields in a solid carcass liquid mosaic model of the erythrocyte 6, 1062
Electrophoretic mobility, mechanism of the change in - of erythrocytes on u.h.f. irradiation 5, 930
Electrostatic charge, exchange of H^+ for K^+ ions and change in the - of the surface in *E. coli* 2, 353
Electrostriction of bilayer lipid membranes 4, 673
Electrostriction of vesicular membranes 3, 476
Energy, activation - of enzymatic hydrolysis of various α-chymotrypsin substrates 5, 810
Energy of re-organization of the medium in the charge transfer reactions in the protein globule 1, 14
Energy migration, theoretical calculation of - on photosynthesis for different models of organization of the light-collecting matrix 5, 801
Energy transfer, rates of - between pigments at the bacterial reaction centres 1, 171
Energy transformation in mitochondria: role in the iron sulphur centre *N*-2 of NADH-dehydrogenase 3, 557
Enzymatic catalysis, analysis of the kinetic isotope effects in H_2O–D_2O mixtures on - : detection of conformational dynamic processes 2, 200
Enzymatic hydrolysis, activation energy of - of various α-chymotrypsin substrates 5, 810
Enzymatic reactions, kinetic analysis of the possible influence of a constant magnetic field on the rate of - 1, 19
Enzyme, kinetic resonance in the open biochemical reaction catalyzed by an - in forms with different activity 4, 626
Enzyme globule, determination of the thermal expansion coefficient of pepsin crystals. Anisotropy of the conformation dynamics of the - 3, 543
Enzyme inactivation on exposure to mechanical agents 2, 207
Enzymes, conditions for the independence of the ratios of the controlling forces of - from the choice of the metabolic subsystem incorporating them 5, 831
Enzymes, possible mechanisms of mechanical inactivation of - 3, 403
Ephydatia fluviatilis, two states of dissociated cells of the freshwater sponge - 2, 386
Equilibrium size of area per molecule in a phospholipid bilayer 6, 1053
Erythrocyte, interpretation of the mechanism of changes in the electrophoretic mobility on exposure to physical fields in a solid carcass liquid mosaic model of the - 6, 1062
Erythrocyte membranes, permeability of and damage to - at temperatures from −1 to −9°C as shown by the n.m.r. relaxation method 2, 290
Erythrocytes, change in aggregation of - and thrombocytes in response to ultraviolet radiation 1, 97
Erythrocytes, dependence of the photodamage to - on the intensity of ultraviolet radiation 1, 169
Erythrocytes, dynamics of oxygen transport in - 3, 484
Erythrocytes, mechanism of the change in electrophoretic mobility of - on u.h.f. irradiation 5, 930

Erythrocytes, possibility of evaluating the functional activity of human - by the ^{31}P n.m.r. method 6, 1100
Escherichia coli, changes in redox potential in transitional processes in pure and mixed cultures of - and *Serratia marcescens* 2, 325
Escherichia coli, effect of the dynamics of dehydration on the characteristics of the bacterial cells - 3, 490
Escherichia coli, exchange of H^+ for K^+ ions and change in the electrostatic charge of the surface in - 2, 353
Escherichia coli, relationship between the electrokinetic potential and the fluorescence of 8-anilino-1-naphthalene sulphonate in a depleted and non-depleted culture of - 6, 1091
Escherichia coli, role of individual ATPase subunits of - in hydrogen-potassium exchange 2, 280
Escherichia coli cells, study of low temperature crystallization in - by the n.m.r. method 2, 295
Escherichia coli culture, dynamics of redox potential in an - in a regime of periodic cultivation 5, 908
E.s.r. signals I and II, change in the - during development of the photosynthetic apparatus of wheat seedlings in light of different spectral composition 4, 722
E.s.r. spectra, determination of the frequency of spin exchange of nitroxyl radicals and oxygen by the method of continuous saturation of the - of the radicals 6, 1007
E.s.r. study of the state of mitochondria at low temperatures 2, 382
Excitable membranes, role of the structural rearrangements of the lipids of - in the generation of action potentials by higher plants on moderate cooling 3, 454
Excitation, proton transport in the nerve on - 2, 333
Excitation, the muscle as a system with parametric - 5, 974
Excited states, study of the kinetics of deactivation of - in the antenna of the chromatophores of *Rhodospirillum rubrum* by picosecond differential spectrophotometry 3, 436
Eye cells, photogeneration of O_2^- by ommochromes and their role in the system of anti-oxidative protection of the - of invertebrates 5, 959

Fatty acids, oscillations and trigger transitions in a stoichiometric model of the synthesis of - 6, 1024
Ferricytochrome P450, reduction of - by eosin photoradicals 5, 799
Fibres, study of the electromechanical coupling in cardiac - by an optical method 5, 968
Flower buds, nucleation and growth of ice in winter - 3, 519
Fluorafur interactions with biopolymers 2, 226
Fluorescence, relationship between the electrokinetic potential and the - of 8-anilino-1-naphthalene sulphonate in a depleted and non-depleted culture of *E. coli* 6, 1091
Fluorescence, study of the organization of pigments in the phycobilisome by sensitized - 3, 442
Fluorescence, use of the phenomenon of annihilation delayed - for investigating the structural organization of the sarcoplasmic reticulum 5, 883
Fluorescent probe, a - —a cholesterol analogue: its localization in the lipoproteins of the blood plasma and in model lipid particles 6, 1078
Fluorescent probe, use of rhodamine 6G as a - for investigating chloroplast membranes 6, 1069
Fluorescing state of bacteriorhodopsin and its participation in primary photoprocesses in purple membranes at −196°C 6, 1082
Free radicals and oxidative phosphorylation in chemical carcinogenesis 4, 750

Free radicals, kinetics of change in the content of - in bacterial cancer of plants 2, 329
Freshwater sponge, two states of dissociated cells of the - *Ephydatia fluviatilis* 2, 386
Frog crystalline lens, X-ray diffraction on the intact isolated - 5, 953
Frog photoreceptor cells, potassium conductivity of plasma membrane of - 5, 859
Frog skin, effect of low intensity continuous millimetre radiation on the transport of Na^+ ions in the - 3, 527
Fusion method, use of the - to detect differences between DNA of normal and tumour tissue 2, 346

Gamma resonance absorption lines, study of the form of the - of blood oxyhaemoglobin in leukaemia 2, 342
Globular proteins, rotary isomerization of the side groups of - and its influence on the indicatrix of X-ray scatter of proteins in solution 3, 569
Globular state, theory of packing of bihelical DNA: - of uniform elastic macromolecule in a cavity of small volume 2, 221
Glucocorticoids, mathematical modelling of the influence of the - on the movement and kinetics of proliferation of mammalian lymphocytes 3, 503
Glutathione, mechanism of retinal photosensitized oxidation of - 2, 384
Glycerol, effect of - on the capacitance and conductivity of bilayer lipid membranes 2, 245
Glycine, mechanism of the influence of - , α-alanine and γ-aminobutyric acid on the heat stability of DNA 1, 160
Growth of a cell culture, study of the iron-sulphur centres of the respiratory chain of the mitochondria at different stages of - of the hamster *Cricetulus griceus* 4, 694
Growth of ice, nucleation and - in winter flower buds 3, 519
Growth of phytoplankton, study of the oxygen isotope composition of arctic drift ice in connexion with activation of the - at the boundary of the melting ice 5, 912

Haeme-contatining proteins, use of quenching of phosphorescence to evaluate the spatial interactions of - 2, 197
Haemoglobin, study of the relaxation of non-equilibrium states of - by g.r. spectroscopy 3, 397
Haemoglobin, study of the structure of - by the "allosteric label" method 1, 38
Halophilic micro-organisms, obtaining the spectral characteristics of dividing cells as illustrated by - 6, 1088
Hamster *Cricetulus griceus*, study of the iron-sulphur centres of the respiratory chain of the mitochondria at different stages of growth of a cell culture of the - 4, 694
Heat stability, mechanism of the influence of glycine, α-alanine and γ-aminobutyric acid on the - of DNA 1, 160
Helix of DNA, influence of the size of ligand molecules on the stability of the double - 5, 828
Heteropolymer globule, simple soluble model of the - 1, 27
Higher plants, isotope fractionation on movement of water in the xylem of - 6, 1134
Higher plants, role of the structural rearrangements of the lipids of excitable membranes in the generation of action potentials by - on moderate cooling 3, 454
Histone H1, effect of ionic strength of medium on the structure and aggregation of calf thymus - 4, 645
Hormones, iodine-containing - —dipole modifiers of phospholipid membranes 5, 875
Hormones, thyroid - and the content of bivalent iron ions in the rabbit liver 5, 880
Horseradish peroxidase, stabilization by polyols and sugars of - modified with strophanthin K 6, 1013

Human erythrocytes, possibility of evaluating the functional activity of - by the ^{31}P n.m.r. method 6, 1100
Human lungs, modelling the regional deposition of aero-ions in the - 5, 965
Human serum albumin, specific interaction of piperidine derivatives with - 3, 541
Hydrated phases, model of the interaction of lipids and cholesterol in the - : formation of linear cholesterol multimers 5, 856
Hydration as a parameter for determining variety differences of wheat grains 4, 758
Hydration, causes of the change in - on protonation of DNA 2, 217
Hydration, influence of cholesterol on the - of acyl galactosyl sphyngosine 1, 162
Hydration isotherms of DNA, study of the conformation dependent - 3, 415
Hydrocarbon region, use of the "methylene gas" model to describe the - of the lipid bilayer 5, 863
Hydrogen-potassium exchange, role of individual ATPase subunits of *E. coli* in - 2, 280
Hydroid polyps, *Obella longissima*, analysis of growth pulsations of - 6, 1104
Hydrolysis, activation energy of enzymatic - of various α-chymotrypsin substrates 5, 810
Hydroperoxides, study of radicals formed on interaction of organic - with iron ions, by the spin trap method 3, 579
Hydrophobicity, possibility of determining the structural organization of bacterial and animal rhodopsins from the hydrophobicity of the amino acid residues 3, 421
Hydrostatic pressures in the cells and elastic modulus of the plasmalemma in the halophilic algae *Dunaliella parva* 5, 903

Ice in winter flower buds, nucleation and growth of - 3, 519
IgA1 and IgA2 human immunoglobulins, structural investigations of - tagged with two different spin labels 5, 814
Immune response, luminescent parameters of the nucleated blood cells during the - of the body 2, 304
Immunoglobulin G, influence of dehydration on the interdomain interactions in - and its fragments 4, 631
Impregnated filters as model of biological membranes 4, 684
Inactivation, possible mechanisms of mechanical - of enzymes 3, 403
Inactivation, resonance phenomena in membranes containing ionic channels with - 5, 891
Infrared and electron vibratory spectra of adenine and its derivatives in an argon matrix 4, 602
Inhibition, reversibility of - by phenanthroline of electron transport in the chromatophores of the non-sulphur purple bacteria on exposure to ubiquinone and alpha-tocopherol 3, 548
Inhibitors, analysis of the form of the induction curve of luminescence of chlorophyll in chloroplasts in the presence of electron transport - 5, 846
Inhibitors, effect of phosphodiesterase - on the membrane potential and respiration of the mitochondria 1, 173
Interaction, change in the electrical and visco-elastic properties of bilayer lipid membranes on - with proteins and lipoproteins 3, 459
Interaction, model of the - of lipids and cholesterol in the hydrated phases: formation of linear cholesterol multimers 5, 856
Interaction of vanadate with with the contractile system of the rabbit psoas muscle in the active, relaxed and rigor states 2, 309
Interaction, specific - of piperidine derivatives with human serum albumin 3, 541
Interaction, study of radicals formed on - of organic hydroperoxides with iron ions, by the spin trap method 4, 579

Interactions, modelling of the intercellular contact - of microorganisms by a fraction of the plasma membranes **5,** 941
Interactions, use of quenching of phosphorescence to evaluate the spatial - of haeme-containing proteins **2,** 197
Intercellular contact interactions, modelling of the - of microorganisms by a fraction of the plasma membranes **5,** 941
Intercelllar transport of water, use of paramagnetic ions in studies of - by the n.m.r. method with a pulsed magnetic field gradient **1,** 92
Interdomain interactions, influence of dehydration on the - in immunoglobulin G and its fragments **4,** 631
Intra- and intercellular media, temperature dependence of osmotic pressure of the - in plant tissues **1,** 154
Intracellular pH, effect of concanavaline *A* on the - of thymocytes **3,** 550
Intramembrane field compensation method, measurement of potential jumps on adsorption of phloretin and phlorezin on the surface of lipid membranes by the - **3,** 464
Intramolecular phase, collapse and - layering in a polymer in which each unit may be in two states **4,** 621
Invertebrates, photogeneration of O_2^- by ommochromes and their role in the system of anti-oxidative protection of the eye cells of - **5,** 959
Iodine-containing hormones—dipole modifiers of phospholipid membranes **5,** 875
Ionic channels formed in bilayer lipid membranes by large subunits of Na, K-ATPase and activated by ATP and *p*-nitrophenyl phosphate **4,** 756
Ionic channels, lipid bilayer with - —two pole device with properties of inductivity **2,** 370
Ionic channels, resonance phenomena in membranes containing - with inactivation **5,** 891
Ionic strength, effect of - of medium on the structure and aggregation of calf thymus histone H1 **4,** 645
Ionophore, redistribution of Ca^{2+} ions in a lymphocyte suspension exposed to an - **6,** 1096
Tb^{3+} Ions, activation of the chemiluminescence of the liposomes on peroxidation of the lipids by - **3,** 432
Na^+ Ions, effect of low intensity continuous millimetre radiation of the transport of - in the frog skin **3,** 527
Ions, exchange of H^+ for K^+ - and change in the electrostatic charge of the surface in *E. coli* **2,** 353
Ca Ions, influence of - on the thermoluminescence accompanying peroxidation of the lipids **1,** 61
Ca^{2+} Ions, redistribution of - in a lymphocyte suspension exposed to an ionophore **6,** 1096
Ions, thyroid hormones and the content of bivalent iron - in the rabbit liver **5,** 880
Ion transport, possible influence of the surface of ideally polarized metals on - in the cell membrane **4,** 754
Iron ions, study of radicals formed on interaction of organic hydroperoxides with - , by the spin trap method **4,** 579
Iron sulphur centre *N*-2, energy transformation in mitochondria: role of the - of NADH-dehydrogenase **3,** 557
Iron-sulphur centres, study of the - of the respiratory chain of the mitochondria at different stages of growth of a cell culture of the hamster *Cricetulus griceus* **4,** 694
Irradiation, mechanism of the change in electrophoretic mobility of erythrocytes on u.h.f. - **5,** 930
Irradiation, system of regulating lipid oxidation and the structural state of the nuclear membrane after the action of - on tumour bearing animals **1,** 53
Iso-energetic discreteness, detection of - in some rhythmic movements **6,** 1148
Isoenzymes, physicochemical aspects of the manifestation of the action of - **3,** 408

Isometric contraction, strength of single - and phases of incomplete tetanus 1, 151
Isotope fractionation on movement of water in the xylem of higher plants 6, 1134
Isotopes, dynamic model of the fractionation of carbon - in the living cell 6, 1108

Joint angle in man, wave nature of the central process of formation of the trajectories of change in the - 1, 130

Kinetic analysis of the possible influence of a constant magnetic field on the rate of enzymatic reactions 1, 19
Kinetic investigation of the decay of radicals in ultraviolet irradiated silk fibroin 4, 584
Kinetic isotope effects, analysis of the - in H_2O–D_2O mixtures on enzymatic catalysis: detection of conformational dynamic processes 2, 200
Kinetic model of the functioning of alcohol dehydrogenase with reference to the conformational changes in protein 5, 820
Kinetic resonance in the open biochemical reaction catalyzed by an enzyme in forms with different activity 4, 626
Kinetics of change in the content of free radicals in bacterial cancer of plants 2, 329
Kinetics of the formation of optically active liquid crystalline microphases of low molecular weight DNA 2, 375
Kinetics of the origin of the photo-induced potential difference in a model system containing bacteriorhodopsin 3, 427
Kinetics study of the - of deactivation of excited states in the antenna of the chromatophores of *Rhodospirillum rubrum* by picosecond differential spectrophotometry 3, 436
Kinetics of decay, chlorophyll photosensitized luminescence of singlet oxygen in polystyrene films. - after a laser flash 6, 1003
Klinophotokinesis, periodic electrical activity in a unicellular flagellate alga and its possible link with - 4, 704

Laser flash, chlorophyll photosensitized luminescence of singlet oxygen in polystyrene films. Kinetics of decay after a - 6, 1003
Lecithin liposomes, structural conversions and aggregation stability of - in media with cryoprotectors 2, 284
Leukaemia, study of the form of the gamma resonance absorption lines of blood oxyhaemoglobin in - 2, 342
Ligand molecules, influence of the size of - on the stability of the double helix of DNA 5, 828
Light, effect of visible - on the ATP-synthetase function of mitochondria 4, 698
Light, influence of - and electrical current on pulses of periodic activity in the unicellular flagellate alga 5, 919
Light, value of the photosynthetic units of photosystems I and II in barley seedlings as a function of the intensity and spectral composition of the - 2, 319
Light-collecting matrix, theoretical calculation of energy migration on photosynthesis for different models of organization of the - 5, 801
Light dependence of photosynthesis in a model with two photochemical reactions 4, 590
Light perception, mathematical modelling of two pathways of - by the photoreceptor cell 1, 184
Linear analysis of the stability of systems with diffusion as ilustrated by an ecological example 1, 140

Linolenic acid radicals, study the of mechanism of formation of - on initiation of peroxidation inthe Fenton reagent by the spin trap method 5, 837
Lipid bilayer, clusters in the liquid crystalline - 3, 449
Lipid bilayer, use of the "methylene gas" model to describe the hydrocarbon region of the - 5, 863
Lipid bilayer with ionic channels—two pole device with properties of inductivity 2, 370
Lipid bilayers, form of the line of proton magnetic resonance of - 1, 82
Lipid membranes, influence of bivalent cations on the temperature of the phase transition in - 1, 66
Lipid membranes, measurement of potential jumps on adsorption of phloretin and phlorezin on the surface of - by the intramembrane field compensation method 3, 464
Lipid oxidation, system of regulating - and the structural state of the nuclear membrane after the action of irradiation on tumour bearing animals 1, 53
Lipid particles, a fluorescent probe—a cholesterol analogue: its localization in the lipoproteins of the blood plasma and in model - 6, 1078
Liliids, activation of the chemiluminescence of the liposomes on peroxidation of the - by Tb^{3+} ions 3, 432
Lipids, effect of dinitrophenol on the rate of resynthesis of - in mitochondrial membranes 3, 546
Lipids, influence of Ca ions on the thermoluminescence accompanying peroxidation of the - 1, 61
Lipids, model of the interaction of - and cholesterol in the hydrated phases: formation of linear cholesterol multimers 5, 856
Lipids, role of the structural rearrangements of the - of excitable membranes in the generation of axtion potentials by higher plants on moderate cooling 3, 454
Lipopolysaccharide protein complex, sedimentation properties of a - of yersinia pseudotuberculosis 6, 1029
Lipoproteins, a fluorescent probe—a cholesterol analogue: its localization in the - of the blood plasma and in model lipid particles 6, 1078
Lipoproteins, change in the electrical and visco-elastic properties of bilayer lipid membranes on interaction with proteins and - 3, 459
Liposomes, activation of the chemiluminescence of the - on peroxidation of the lipids by Tb^{3+} ions 3, 432
Liquid, transcapillary filtration of a - modelled with concentrated parameters 1, 135
Liquid crystalline microphases, kinetics of the formation of optically active - of low molecular weight DNA 2, 375
Liver, thyroid hormones and the content of bivalent iron ions in the rabbit - 5, 880
Liver tissues, electron paramagnetic resonance spectra with $g = 2{\cdot}03$ of animal - on exposure to butylhydroxytoluene and diethylnitrosamine 3, 524
Low molecular weight DNA, kinetics of the formation of optically active liquid crystalline microphases of - 2, 375
Luminescence, chlorophyll photosensitized - of singlet oxygen in polystyrene films. Kinetics of decay after a laser flash 6, 1003
Luminescence of chlorophyll, analysis of the form of the induction curve of - in chloroplasts in the presence of electron transport inhibitors 5, 846
Luminescent parameters of the nucleated blood cells during the immune response of the body 2, 304
Lungs, modelling the regional deposition of aero-ions in the human - 5, 965
Lymphocyte suspension, redistribution of Ca^{2+} ions in a - exposed to an ionophore 6, 1096
Lymphocytes, electrical charge of the surface of - and their capacity for mitotic division in induced carcinogenesis 1, 102

Macromolecule, theory of packing of bihelical DNA: globular state of uniform elastic - in a cavity of small volume 2, 221
Macromolecules, hydrate surroundings of the - of biopolymers as shown by u.h.f. dielectrometry 6, 1019
Macromolecules, thermal motion of - and the Mössbauer absorption spectrum 1, 32
Macroscopic fluctuations in the alcohol dehydrogenase reaction 5, 823
Magnetic "capture" of cells, magnetic susceptibility and - 5, 922
Magnetic field, effect of constant - on the electrical capacitance of bilayer lipid membranes 4, 667
Magnetic field, influence of a series of pulses of a - of low amplitude on the electrical activity of mollusc neurones 2, 355
Magnetic field, influence of a single pulse of a - on the electrical activity of mollusc neurones 1, 116
Magnetic field, kinetic analysis of the possible influence of a constant - on the rate of enzymatic reactions 1, 19
Magnetic field, nature of the signal ($g \simeq 3{\cdot}0$) appearing on cooling biological specimens in a - 6, 1073
Magnetic field gradient, use of paramagnetic ions in studies of intercellular transport of water by the n.m.r. method with a pulsed - 1, 92
Magnetic susceptibility and magnetic "capture" of cells 5, 922
Mammalian lymphocytes, mathematical modelling of the influence of the glucocorticoids on the movement and kinetics of proliferation of - 3, 503
Mathematical model of the transport of a liquid in the convoluted proximal renal tubule and the surrounding capillaries 4, 741
Mathematical modelling, of the influence of the glucocorticoids on the movement and kinetics of proliferation of mammalian lymphocytes 3, 503
Mathematical modelling of two pathways of light perception by the photoreceptor cell 1, 184
Matrix, theoretical calculation of energy migration on photosynthesis for different models of organization of the light-collecting - 5, 801
Mechanical agents, enzyme inactivation on exposure to - 2, 207
Mechanism, dielectrophoresis of aqueous inclusions in b.l.m. as a possible - of the initial stage of electrical breakdown 2, 249
Mechanism of action of *o*-phenanthroline on photo-induced electron transport in purple bacteria 4, 650
Mechanism of piezoelectrical polarization of collagen 2, 232
Mechanism of retinal photosensitized oxidation of glutathione 2, 384
Mechanism of the change in electrophoretic mobility of erythrocytes on u.h.f. irradiation 5, 930
Mechanism of the influence of glycine, α-alanine and γ-aminobutyric acid on the heat stability of DNA 1, 160
Mechanism, possible - of the irreversible binding of membrane modifiers 1, 158
Mechanism, possible - of the stimulation of proliferation of cells by various damaging agents 5, 917
Mechanism, theory of membrane fusion. Adhesion-condensation - 2, 265
Mechanism of changes, interpretation of the - in the electrophoretic mobility on exposure to physical fields in a solid carcass liquid mosaic model of the erythrocyte 6, 1062
Mechanisms, possible - of mechanical inactivation of enzymes 3, 403
Melting curve, determination of the nucleotide content of DNA blocks from measurement of the areas under the - 3, 536

Melting ice, study of the oxygen isotope composition of arctic drift ice in connexion with activation of the growth of phytoplankton at the boundary of the - 5, 912
Melting of crystals, special aspects of the - of whale metmyoglobin 1, 165
Membrane, fluctuations of the electrical characteristics of the - in "stress" states 3, 470
Membrane, general scheme foı calculating the fluctuations in current and voltage of the - in stable and metastable states 1, 75
Membrane, possible influence of the surface of ideally polarized metals on ion transport in the cell - 4, 754
Membrane channels, link between the measured exchange constant and the microscopic structure of the - 6, 1066
Membrane fusion, theory of - . Adhesion-condensation mechanism 2, 265
Membrane in "stress" states, fluctuations of the electrical characteristics of the - 3, 470
Membrane modifiers, possible mechanism of the irreversible binding of - 1, 158
Membrane potential, effect of phosphodiesterease inhibitors on the - and respiration of the mitochondria 1, 173
Membrane structures, effective water permeability of a complex of - of plant cells at subzero temperatures 5, 943
Membranes, effect of dinitrophenol on the rate of resynthesis of lipids in mitochondrial - 3, 546
Membranes, iodine-containing hormones—dipole modifiers of phospholipid - 5, 875
Membranes, link between the K^+-dependent swelling of the cells and the state of the cell - 4, 752
Membranes, resonance phenomena in - containing ionic channels with inactivation 5, 891
Membranes, use of rhodamine 6G as a fluorescent probe foı investigating chloroplast - 6, 1069
Metabolic subsystem, conditions for the independence of the ratios of the controlling forces of enzymes from the choice of the - incorporating them 5, 831
Methaemoglobin, reduction of - by photoradicals of benzophenone-3,3′,4,4′-tetracarboxylic acid 6, 1005
^{31}P n.m.r. method, possibility of evaluating the functional activity of human erythrocytes by the - 6, 1100
Method of continuous saturation, determination of the frequency of spin exchange of nitroxyl radicals and oxygen by the - of the e.s.r. spectra of the radicals 6, 1007
Method of negative contrasting, electron microscopy investigation of the structure of aqueous gelatine gels by the - 2, 372
"Methylene gas" model, use of the - to describe the hydrocarbon region of the lipid bilayer 5, 863
Methylviologen radicals, reduction of cytochrome P450 by free - 3, 539
Microbes in suspension, study of agglutination of - by a spectro-turbidimetric method 5, 935
Microorganisms, modelling of the intercellular contact interactions of - by a fraction of the plasma membranes 5, 941
Micro-organisms, obtaining the spectral characteristics of dividing cells as illustrated by halophilic - 6, 1088
Microscopic structure, link between the measured exchange constant and the - of the membrane channels 6, 1066
Migrations of zooplankton, fluctuations in natural electromagnetic fields and rhythm of diurnal vertical - 6, 1116
Mitochondria, effect of phosphodiesterase inhibitors on the membrane potential and respiration of the - 1, 173

Mitochondria, effect of respiration substrates on the ATPase activity of the uncoupled - 2, 366
Mitochondria, effect of visible light on the ATP-synthetase function of - 4, 698
Mitochondria, energy transformation in - : role in the iron sulphur centre *N*-2 of NADH-dehydrogenase 3, 557
Mitochondria, e.s.r. study of the state of - at low temperatures 2, 382
Mitochondria, influence of external factors on ATP synthesis with abrupt rise in pH in the - 2, 365
Mitochondria, study of the iron-sulphur centres of the respiratory chain of the - at different stages of growth of a cell culture of the hamster *Cricetulus griceus* 4, 694
Mitochondrial carrier of adenylates regulates the production of ATP in the physiological range of respiratory rates 3, 497
Mitochondrial membranes, effect of of dinitrophenol on the rate of resynthesis of lipids in - 3, 546
Mitotic division, electrical charge of the surface of lymphocytes and their capacity for - in induced carcinogenesis 1, 102
Model, dynamic - of the fractionation of carbon isotopes in the living cell 6, 1108
Model of non-electrogenic transport of cations across bilayer lipid membranes 2, 255
Model of the central regulation of the parameters of motor trajectories 2, 338
Model of the interaction of lipids and cholesterol in the hydrated phases: formation of linear cholesterol multimers 5, 856
Model representations of the stochastic fluctuations in postsynaptic activity 1, 121
Model system, kinetics of the origin of the photo-induced potential difference in a - containing bacteriorhodopsin 3, 427
Molecular adaptogen receptor, cell surface RNA—a possible - 5, 889
Molecules, calorimetric investigation of the structural organization of ovomucoid - 2, 211
Mollusc *L. stagnalis*, modulation with dopamine of the Ca component of the action potential of the soma of the neurones of the - 2, 314
Mollusc neurones, influence of a series of pulses of a magnetic field of low amplitude on the electrical activity of - 2, 355
Mollusc neurones, influence of a single pulse of a magnetic field on the electrical activity of - 1, 116
Mössbauer absorption spectrum, thermal motion of macromolecules and the - 1, 32
Mössbauer effect, stochastic dynamics of proteins and the - 5, 804
Muscle, the - as a system with parametric excitation 5, 974
Muscle cells, connection of - is a protein of the collagen type 2, 348
Muscle tissue, rheological model of - in a state of constant activation 1, 146
Muscles, spectroscopic study of myosin of denervated rabbit - 2, 361
Myosin, spectroscopic study of - of denervated rabbit muscles 2, 361
Myxomycetes *Physarum*, wave regimes of the contractile activity of strands of the plasmodium of the - and their link with transfer of protoplasm 1, 106

NADH-dehydrogenase, energy transformation in mitochondria: role of the iron sulphur centre *N*-2 of - 3, 557
Nerve, proton transport in the - on excitation 2, 333
Nerve cells, influence of a pulsed magnetic field on the electrical activity of crayfish - 4, 747
Neuronal rhythmics, configurational generators of - 5, 983
Neurones, influence of a single pulse of a magnetic field on the electrical activity of mollusc - 1, 116
Nitroxyl radicals, determination of the frequency of spin exchange of - and oxygen by the method of continuous saturation of the e.s.r. spectra of the radicals 6, 1007

N.m.r. method, study of low temperature crystallization in *E. coli* cells by the 2, 295
N.m.r. method, use of parametric ions in studies of intercellular transport of water by the - with a pulsed magnetic field gradient 1, 92
N.m.r. relaxation method, permeability of and damage to erythrocyte membranes at temperatures from −1 to −9°C as shown by the - 2, 290
Noradrenaline, analysis of the regulation of secretion of - by the auto-adrenoreceptors and the frequency of stimulation 5, 979
Nuclear magnetic resonance method, diagnosis of the resistance of plant cells at low temperatures by the pulsed - 4, 729
Nuclear membrane, system of regulating lipid oxidation and the structural state of the - after the action of irradiation on tumour bearing animals 1, 53
Nucleated blood cells, luminescent parameters of the - during the immune response of the body 2, 304
Nucleation and growth of ice in winter flower buds 3, 519
Nucleotide content, determination of the - of DNA blocks from measurement of the areas under the melting curve 3, 536

Obelia longissima, analysis of growth pulsations of hydroid polyps, - 6, 1104
Ommochromes, photogeneration of $O_2^{\cdot}$ by - and their role in the system of antioxidative protection of the eye cells of invertebrates 5, 959
Optical method, study of the electromechanical coupling in cardiac fibres by an - 5, 968
Osmotic pressure, dependence of the activity of the work of the sodium pump on the - of the medium 5, 898
Osmotic pressure, temperature dependence of - of the intra- and intercellular media in plant tissues 1, 154
Ovomucoid molecules, calorimetric investigation of the structural organization of - 2, 211
Oxidation, system of regulating lipid - and the structural state of the nuclear membrane after the action of irradiation on tumour bearing animals 1, 53
Oxidation of glutathione, mechanism of retinal photosensitized - 2, 384
Oxidative phosphorylation, free radicals and - in chemical carcinogenesis 4, 750
Oxygen, chlorophyll photosensitized luminescence of singlet - in polystyrene films. Kinetics of decay after a laser flash 6, 1003
Oxygen, determination of the frequency of spin exchange of nitroxyl radicals and - by the method of continuous saturation of the e.s.r. spectra of the radicals 6, 1007
Oxygenase content, effect of ionol on - of proliferating animal tissues 5, 948
Oxygen isotope composition, study of the - of arctic drift ice in connexion with activation of the growth of phytoplankton at the boundary of the melting ice 5, 912
Oxygen transport, dynamics of - in erythrocytes 3, 484
Ozone, influence of - on the permeability of flat bilayer lipid membranes 2, 359

Paramagnetic ions, use of - in studies of intercellular transport of water by the n.m.r. method with a pulsed magnetic field gradient 1, 92
Parameters of motor trajectories, model of the central regulation of the - 2, 338
Pepsin crystals, determination of the thermal expansion coefficient of - . Anisotropy of the conformation dynamics of the enzyme globule 3, 543
Permeability, influence of ozone on the - of flat bilayer lipid membranes 2, 359
Permeability of bilayer lipid membranes for amphotericin β 2, 357
Peroxidation, activation of the chemiluminescence of the liposomes on - of the lipids by Tb^{3+} ions 3, 432

Peroxidation, influence of Ca ions on the thermoluminescence accompanying - of this lipids 1, 61
Peroxidation, study of the mechanism of formation of linolenic acids radicals on initiation of - in the Fenton reagent by the spin trap method 5, 837
Phase transition, appearance of dissipative structures by the type of - of order I at degenerate bifurcations 4, 768
Phase transition in native collagen in the presence of salts 1, 48
Phase transition, influence of bivalent cations on the temperature of the - in lipid membranes 1, 66
Phases of incomplete tetanus, strength of single isometric contraction and - 1, 151
o-**Phenanthroline,** mechanism of action of - on photo-induced electron transport in purple bacteria 4, 650
Phenanthroline, reversibility of inhibition by - of electron transport in the chromatophores of the non-sulphur purple bacteria on exposure to ubiquinone and alpha-tocopherol 3, 548
Phosphatidyl choline, effect of chlorophyll on the polymorphic phase equilibrium of egg - 2, 368
Phospholipid bilayer, equilibrium size of area per molecule in a - 6, 1053
Phospholipid membranes, iodine-containing hormones—dipole modifiers of - 5, 875
Phosphorylation, free radicals and oxidative - in chemical carcinogenesis 4, 750
Photochemical and dark cycle reactions, coupling of - during photosynthesis 2, 379
Photochemical reactions, light dependence of photosynthesis in a model with two - 4, 590
Photodamage, dependence of the - to erythrocytes on the intensity of ultraviolet radiation 1, 169
Photogeneration of O_2^- by ommochromes and their role in the system of anti-oxidative protection of the eye cells of invertebrates 5, 959
Photo-induced electron transport, mechanism of action of *o*-phenanthroline on - in purple bacteria 4, 650
Photoprocesses, fluorescing state of bacteriorhodopsin and its participation in ptimary - in purple membranes at −196°C 6, 1082
Photoradicals, reduction of ferricytochrome P450 by eosin — 5, 799
Photoradicals, reduction of methaemoglobin by - of benzophenone-3,3′, 4,4′-tetracarboxylic acid 6, 1005
Photoreceptor cell, anionic channels of plasma membrane of the - 2, 260
Photoreceptor cell, mathematical modelling of two pathways of light perception by the - 1, 184
Photoreceptor cells, potassium conductivity of plasma membrane of frog - 5, 859
Photosynthesis, coupling of photochemical and dark cycle reactions during - 2, 379
Photosynthesis, light dependence of - in a model with two photochemical reactions 4, 590
Photosynthesis, theoretical calculation of energy migration on - for different models of organization of the light-collecting matrix 5, 801
Photosynthesizing bacteria, activity of the reaction centres of - *Rhodopseudomonas viridis* on heating and change in pH 1, 1
Photosynthetic apparatus, change in the e.s.r. signals I and II during development of the - of wheat seedlings in light of different spectral composition 4, 722
Photosynthetic electron-transport chain, change in the stoichiometry of proton-electron coupling in the - 5, 841
Photosynthetic reaction centres, steady characteristics of electron transfer at the - 1, 8
Photosynthetic units, value of the - of photosystems I and II in barley seedlings as a function of the intensity and spectral composition of the light 2, 319

Photosystems I and II, value of the photosynthetic units of - in barley seedlings as a function of the intensity and spectral composition of the light 2, 319
Phycobilisome, study of the organization of pigments in the - by sensitized fluorescence 3, 442
Physical and chemical factors, biophysical aspects of the action of - on living organisms protective properties of anti-oxidants 4, 776
Physical-chemical properties, study of the - of prostglandin $F_{2\alpha}$ and its complexes 5, 869
Physical fields, interpretation of the mechanism of changes in the electrophoretic mobility on exposure to - in a solid carcass liquid mosaic model of the erythrocyte 6, 1062
Physicochemical aspects of the manifestation of the action of isoenzymes 3, 408
Physiological range, mitochondrial carrier of adenylate regulates the production of ATP in the - of respiratory rates 3, 497
Phytoplankton, study of the oxygen isotope composition of arctic drift ice in connexion with activation of the growth of - at the boundary of the melting ice 5, 912
Piezoelectrical polarization, mechanism of - of collagen 2, 232
Pigments, rates of energy transfer between - at the bacterial reaction centres 1, 171
Pogments, study of the organization of - in the phycobilisome by sensitized fluorescence 3, 442
Piperidine derivatives, specific interaction of - with human serum albumin 3, 541
Plant cells, diagnosis of the resistance of - at low temperatures by the pulsed nuclear magnetic resonance method 4, 729
Plant cells, effective water permeability of a complex of membrane structures of - at subzero temperatures 5, 943
Plant cells, elastic properties of - 4, 733
Plant cells, model description of the process of release of water from - on cooling 1, 112
Plant tissues, temperature dependence of osmotic pressure of the intra- and intercellular media in - 1, 154
Plant tissues, thermodynamics of the processes in - on cooling 6, 1129
Plasma, a fluorescent probe—a cholesterol analogue: its localization in the lipoproteins of the blood - and in model lipid particles 6 1078
Plasmalemma, hydrostatic pressures in the cells and elastic modulus of the - in the halophilic algae *Dunaliella parva* 5, 903
Plasma membrane, anionic channels of - of the photoreceptor cell 2, 260
Plasma membrane, potassium conductivity of - of frog photoreceptor cells 5, 859
Plasma membranes, modelling of the intercellular contact interactions of microorganisms by a fraction of the - 5, 941
Plasmodium, wave regimes of the contractile activity of strands of the - of the myxomycetes *Physarum* and their link with transfer of protoplasm 1, 106
Polarizability, effect of the - of the charged groups of biological and artificial membranes on the specific adsorption of monovalent cations 4, 689
Polarized spectra, study of the structure of bone tissue using the - of combination scatter 6, 1140
Polaron mechanism, problem of the - of the background conductivity of bilayer lipid membranes 1, 72
Polymer, collapse and intramolecular phase layering in a - in which each unit may be in two states 4, 621
Polyols, stabilization by - and sugars of horseradish peroxidase modified with strophanthin K 6, 1013
Polyps, *Obelia longissima*, analysis of growth pulsations of hydroid - 6, 1104
Polyriboadenylic acids, change in the electrical conductivity of concentrated salt-

free solutions in connexion with the formation of a complex of polyribouridylic and - 4, 610
Polyribouridylic acids, change in the electrical conductivity of concentrated salt-free solutions in connexion with the formation of a complex of polyriboadenylic and - 4, 610
Polystyrene films, chlorophyll photosensitized luminescence of singlet oxygen in - . Kinetics of decay after a laser flash 6, 1003
Postsynaptic activity, model representations of the stochastic fluctuations in - 1, 121
Potassium channel, model of the selective filter of the - 4, 663
Potassium conductivity of plasma membrane of frog photoreceptor cells 5, 859
Potential difference, kinetics of the origin of the photo-induced - in a model system containing bacteriorhodopsin 3, 427
Potential jumps, measurement of - on adsorption of phloretin and phlorezin on the surface of lipids membranes by the intramembrane field compensation method 3, 464
Potentials, thermodynamic - , stress tensor and surface tension of unmixed electrolyte layers in an electric field 6, 1056
Proliferating animal tissues, effect of ionol on oxygenase content of - 5, 948
Proliferation of cells, possible mechanism of the stimulation of - by various damaging agents 5, 917
Proliferation of mammalian lymphocytes, mathematical modelling of the influence of the glucocorticoids on the movement and kinetics of - 3, 503
Prostglandin $F_{2\alpha}$, study of the physical-chemical properties of - and its complexes 5, 869
Protective properties, biophysical aspects of the action of physical and chemical factors on living organisms - of anti-oxidants 4, 776
Protein, kinetic model of the functioning of alcohol dehydrogenase with reference to the conformational changes in - 5, 820
Protein complex, sedimentation properties of a lipopolysaccharide - of yersinia pseudotuberculosis 6, 1029
Protein globule, energy of re-organization of the medium in the charge transfer reactions in the - 1, 14
Protein of the collagen type, connectin of muscle cells in a - 2, 348
Proteins, change in the electrical and viscoelastic properties of bilayer lipid membranes on interaction with - and lipoproteins 3, 459
Proteins, comparative study of the - of the bovine crystalline lens in native tissue and in an extract by X-ray diffraction 6, 1123
Proteins, non-monotonic character of the temperature changes in the conformation of - in the pre-denaturing region of temperatures 4, 640
Proteins, rotary isomerization of the side groups of globular proteins and its influence on the indicatrix of X-ray scatter of - in solution 3, 569
Proteins, stochastic dynamics of - and the Mössbauer effect 5, 804
Proteins, use of quenching of phosphorescence to evaluate the spatial interactions of haeme-containing - 1, 197
Protonation of DNA, causes of the change in hydration on - 2, 217
Proton-electron coupling, change in the stoichiometry of - in the photosynthetic electron-transport chain 5, 841
Proton magnetic resonance, form of the line of - of lipid bilayers 1, 82
Proton transport in the nerve on excitation 2, 333
Protoplasm, wave regimes of the contractile activity of strands of the plasmodium of the myxomycetes *Physarum* and their link with transfer of - 1, 106
Pseudotuberculosis, sedimentation properties of a lipopolysaccharide protein complex of yersinia - 6, 1029

Psoas muscle, interaction of vanadate with the contractile system of the rabbit - in the active, relaxed and rigor states 2, 309
Pulsed magnetic field, influence of a - on the electrical activity of crayfish nerve cells 4, 747
Pulses of a magnetic field, influence of a series of - of low amplitude on the electrical activity of mollusc neurones 2, 355
Purple bacteria, mechanism of action of *o*-phenanthroline on photo-induced electron transport in - 4, 650
Purple bacteria, reversibility of inhibition by phenanthroline of electron transport in the chromatophores of the non-sulphur - on exposure to ubiquinone and alpha-tocopherol 3, 548
Purple membranes, fluorescing state of bacteriorhodopsin and its participation in primary photoprocesses in - at −196°C 6, 1082

Quenching of phosphorescence, use of - to evaluate the spatial interactions of haeme-containing proteins 2, 197
Quinone ring, study of the localization of the - of ubiquinone Q-10 in dipalmitoyl phosphatidylcholine liposomes by the triplet probe method 5, 851

Rabbit liver, thyroid hormones and the content of bivalent iron ions in the - 5, 880
Rabbit muscles, spectroscopic study of myosin of denervated - 2, 361
Rabbit psoas muscle, interaction of vanadate with the contractile system of the - in the active, relaxed and rigor states 2, 309
Radiation, change in aggregation of erythrocytes and thrombocytes in response to ultraviolet - 1, 97
Radiation, effect of low intensity continuous millimetre - on the transport of Na^+ ions in the frog skin 3, 527
Radicals, determination of the frequency of spin exchange of nitroxyl radiçals and oxygen by the method of continuous saturation of the e.s.r. spectra of the - 6, 1007
Radicals, free - and oxidative phosphorylation in chemical carcinogenesis 4, 750
Radicals, kinetic investigation of the decay of - in ultraviolet irradiated silk fibroin 4, 584
Radicals, reduction of cytochrome P450 by free methylviologen - 3, 539
Radicals, study of - formed on interaction of organic hydroperoxides with iron ions, by the spin trap method 4, 579
Radicals, study of the mechanism of formation of linolenic acid - on initiation of peroxidation in the Fenton reagent by the spin trap method 5, 837
Reaction, kinetic resonance in the open biochemical - catalyzed by an enzyme in forms with different activity 4, 626
Reaction, macroscopic fluctuations in the alcohol dehydrogenase - 5, 823
Reaction centres, activity of the - of photosynthesizing bacteria *Rhodopseudomonas viridis* on heating and change in pH 1, 1
Reaction centres, measurement of the fourth, eighth and twelfth derivatives of the absorption spectra of the - and chromatophores of *Rhodospirillum rubrum* 6, 1045
Reaction centres, steady characteristics of electron transfer at the photosynthetic - 1, 8
Reactions, energy of re-organization of the medium in the charge transfer - in the protein globule 1, 14
Reactions, light dependence of photosynthesis in a model with two photochemical - 4, 590
Receptor, cell surface RNA—possible molecular adaptogen - 5, 889
Recording of signals, possibility of the distributed code - in non-equilibrium co-operative systems (Structural reflexia) 1, 125

Redox potential, changes in - in transitional processes in pure and mixed cultures of *Escherichia coli* and *Serratia marcescens* 2, 325
Redox potential, dynamics of - in an *E. coli* culture in a regime of periodic cultivation 5, 908
Relaxation, study of the - of non-equilibrium states of haemoglobin by g.r. spectroscopy 3, 397
Relaxation method, permeability of and damage to erythrocyte membranes at temperatures from −1 to −9°C as shown by the n.m.r. - 2, 290
Renal tubule, mathematical model of the transport of a liquid in the convoluted proximal - and the surrounding capillaries 4, 741
Resistance, specific electrical - of the narrow gap between two bilayer lipid membranes 5, 865
Resistance of plant cells, diagnosis of the - at low temperatures by the pulsed nuclear magnetic resonance method 4, 729
Resonance, kinetic - in the open biochemical reaction catalyzed by an enzyme in forms with different activity 4, 626
Resonance, form of the line of proton magnetic - of lipid bilayers 1, 82
Resonance phenomena in membranes containing ionic channels with inactivation 5, 891
Resonance spectra, electron paramagnetic - with $g = 2{\cdot}03$ of animal liver tissues on exposure to butylhydroxytoluene and diethylnitrosamine 3, 524
Respiration, effect of phosphodiesterase inhibitors on the membrane potential and - of the mitochondria 1, 173
Respiration substrates, effect of - on the ATPase activity of the uncoupled mitochondria 2, 366
Respiratory chain, study of the iron-sulphur centres of the - of the mitochondria at different stages of growth of a cell cultures of the hamster *Cricetulus griceus* 4, 694
Respiratory rates, mitochodrial carrier of adenylates regulates the production of ATP in the physiological range of - 3, 497
Resynthesis, effect of dinitrophenol on the rate of - of lipids in mitochondrial membranes 3, 546
Reticulum, use of the phenomenon of annihilation delayed fluorescence for investigating the structural organization of the sarcoplasmic - 5, 883
Retinal photosensitized oxidation, mechanism of - of glutathione 2, 384
Rheological model of muscle tissue in a state of constant activation 1, 146
Rhodamine 6G, use of - as a fluorescent probe for investigating chloroplast membranes 6, 1069
Rhodopseudomonas viridis, activity of the reaction centres of photosynthesizing bacteria - on heating and change in pH 1, 1
Rhodospirillum rubrum, measurement of the fourth, eighth and twelfth derivatives of the absorption spectra of the reaction centres and chromatophores of - 6, 1045
Rhodospirillum rubrum, study of the kinetics of deactivation of excited states in the antenna of the chromatophores of - by picosecond differential spectrophotometry 3, 436
Rhythmic movements, detection of iso-energetic discreteness in some - 6, 1148
RNA, cell surface - —a possible molecular adaptogen receptor 5, 889

Salts, phase transition in native collagen in the presence of - 1, 44
Sarcoplasmic reticulum, effect of the external electrical field on Ca^{2+} transport in the - 3, 480
Sarcoplasmic reticulum, use of the phenomenon of annhilation delayed fluorescence for investigating the structural organization of the - 5, 883

Serratia marcescens, changes in redox potential in transitional processes in pure and mixed cultures of *Escherichia coli* and - 2, 325
Serum albumin, specific interaction pipieridine derivatives with human - 3, 541
Signal ($g \simeq 3{\cdot}0$), nature of the - appearing on cooling biological specimens in a magnetic field 6, 1073
Silk fibroin, kinetic investigation of the decay of radicals in ultraviolet irradiated - 4, 584
Skin, effect of low intensity continuous mellimetre radiation on the transport of Na^+ ions in the frog - 3, 527
Sodium pump, dependence of the activity of the work of the - on the osmotic pressure of the medium 5, 898
Soma of the neurones, modulation with dopamine of the Ca component of the action potential of the - of the mollusc *L. stagnalis* 2, 314
Spectra, infrared and electron vibratory - of adenine and its derivatives in an argon matrix 4, 602
Spectra, investigation of the temperature dependence of the - of circular dichroism of 5-substituted 2′-deoxyuridines 5, 793
Spectral characteristics, obtaining the - of dividing cells as illustrated by halophilic micro-organisms 6, 1088
Spectral composition, change in the e.s.r. signals I and II during development of the photosynthetic apparatus of wheat seedlings in light of different - 4, 722
Spectral composition, value of the photosynthetic units of photosystems I and II in barley seedlings as a function of the intensity and - of the light 2, 319
Spectral studies of chromatin and its components in the vacuum ultraviolet region of the spectrum 6, 1047
Spectrophotometry, study of the kinetics of deactivation of excited states in the antenna of the chromatophores of *Rhodospirillum rubrum* by picosecond differential - 3, 436
Specroscopic study of myosin of denervated rabbit muscles 2, 361
Specroscopy, study of the relaxation of non-equilibrium states of haemoglobin by g.r. - 3, 397
Spectro-turbidimetric method, study of agglutination of microbes in suspension by a - 5, 935
Spectrum, spectral studies of chromatin and its components in the vacuum ultraviolet region of the - 6, 1047
Spider *Steatoda paykulliana*, study of the channel-forming properties of the venom of the - 4, 680
Spin exchange, determination of the frequency of - of nitroxyl radicals and oxygen by the method of continuous saturation of the e.s.r. spectra of the radicals 6, 1007
Spin labels, structural investigations of IgA1 and IgA2 human immunoglobulins tagged with two different - 5, 814
Spin trap method, study of radicals formed on interaction of organic hydroperoxides with iron ions, by the - 4, 579
Spin trap method, study of the mechanism of formation of linolenic acid radicals on initiation of peroxidation in the Fenton reagent by the - 5, 837
Stability of systems, linear analysis of the - with diffusion as illustrated by an encological example 1, 140
Steatoda paykulliana, study of the channel-forming properties of the venom of the spider - 4, 680
Stimulation, analysis of the regulation of secretion of noradrenaline by the auto-adrenoreceptors and the frequency of - 5, 979
Stimulation, possible mechanism of the - of proliferation of cells by various damaging agents 5, 917

Stoichiometric model, oscillations and trigger transitions in a - of the synthesis of fatty acids 6, 1024
Strength of single isometric contraction and phases of incomplete tetanus 1, 151
Strophantin K, stabilization by polyols and sugars of horseradish peroxidase modified with - 6, 1013
Structural changes, use of synchrotron radiation for the X-ray study of the dynamics of - of collagen on dehydration 2, 350
Structural conversions and aggregation stability of lecithin liposomes in media with cryoprotectors 2, 284
Structural functional changes in synaptic brain membranes on ageing 4, 701
Structural investigations of IgA1 and IgA2 human immunoglobulins tagged with two different spin labels 5, 814
Structural organization, calorimetric investigation of the - of ovomucoid molecules 2, 211
Structural organization, possibility of determining the - of bacterial and animal rhodopsins from the hydrophobicity of the amino acid residues 3, 421
Structural rearrangements, role of the - of the lipids of excitable membranes in the generation of action potentials by higher plants on moderate cooling 3, 454
Structural state, system of regulating lipid oxidation and the - of the nuclear membrane after the action of irradiation on tumour bearing animals 1, 53
Structure, effect of ionic strength of medium on the - and aggregation of calf thymus histone H1 4, 645
Structure, link between the measured exchange constant and the microscopic - of the membrane channels 6, 1066
Structure, partial restoration of the ordered - in intact collagen after thermal denaturing 6, 1034
Structure, study of the - of bone tissue using the polarized spectra of combination scatter 6, 1140
Structure of aqueous gelatine gels, electron microscopy investigation of the - by the method of negative contrasting 2, 372
Structure of haemoglobin study of the - by the "allosteric label" method 1, 38
Structures, appearance of dissipative - by the type of phase transition of order I at degenerate bifurcations 4, 768
Sugars stabilization by polyols and - of horseradish peroxidase modified with strophantin K 6, 1013
Surface of ideally polarized metals, possible influence of the - on ion transport in the cell membrane 4, 754
Suspension, redistribution of Ca^{2+} ions in a lymphocyte - exposed to an ionophore 6, 1096
Swelling of the cells, link between the K^+-dependent - and the state of the cell membranes 4, 752
Synchrotron radiation, use of - for the X-ray study of the dynamics of structural changes of collagen on dehydration 2, 350
Synthesis, oscillations and trigger transitions in a stoichiometric model of the - of fatty acids 6, 1024
System of regulating lipid oxidation and the structural state of the nuclear membrane after the action of irradiation on tumour bearing animals 1, 53
System of anti-oxidative protection, photogeneration of O_2^- by ommochromes and their role in the - of the eye cells of invertebrates 5, 959
Systems with diffusion, linear analysis of the stability of - as illustrated by an ecological example 1, 140

Temperature dependence of osmotic pressure of the intra- and intercellular media in plant tissues 1, 154
Tension, thermodynamic potentials, stress tensor and surface - of unmixed electrolyte layers in an electric field 6, 1056
Tensor, thermodynamic potentials, stress - and surface tension of unmixed electrolyte layers in an electric field 6, 1056
Tetanus, strength of single isometric contraction and phases of incomplete - 1, 151
Tetrahymena, role of oxytaxis in the origin of dissipative structures in a culture of - 4, 710
Theoretical calculation of energy migration on photosynthesis for different models of organization of the light-collecting matrix 5, 801
Theory of low temperature processes of electron transfer 4, 596
Theory of membrane fusion. Adhesion-condensation mechanism 2, 265
Theory of packing of bihelical DNA: globular state of uniform elastic macromolecule in a cavity of small volume 2, 221
Thermal denaturing, applicability of thermodynamic analysis of the - of complex proteins on the basis of the van t'Hoff equation 1, 44
Thermal denaturing, partial restoration of the ordered structure in intact collagen after - 6, 1034
Thermal expansion coefficient, determination of the - of pepsin crystals. Anisotropy of the conformation dynamics of the enzyme globule 3, 543
Thermal motion of macromolecules and the Mössbauer absorption spectrum 1, 32
Thermal stability of DNA, conformation and - in aqueous solutions of β-alanine and γ-aminobutyric acid 4, 615
Thermal stability of DNA, conformation and - in aqueous urea solutions 3, 410
Thermodynamic analysis, applicability of - of the thermal denaturing of complex proteins on the basis of the van t'Hoff equation 1, 44
Thermodynamic parameters, evaluation of the - on phasic conversions of cerebrone 4, 657
Thermodynamic potentials, stress tensor and surface tension of unmixed electrolyte layers in an electric field 6, 1056
Thermodynamics of the processes in plant tissues on cooling 6, 1129
Thermoluminescence, influence of Ca ions on the - accompanying peroxidation of the lipids 1, 61
Thrombocytes, change in aggregation of erythrocytes and - in response to ultraviolet radiation 1, 97
Thymocytes, effect of chitosan on the electrophoretic mobility of - 2, 300
Thymocytes, effect of concanavaline *A* on the intracellular pH of - 3, 550
Thyroid hormones and the content of bivalent iron ions in the rabbit liver 5, 880
Tissue, comparative study of the proteins of the bovine crystalline lens in native - and in an extract by X-ray diffraction 6, 1123
Tissues, effect of ionol on oxygenase content of proliferating animal - 5, 948
Tissues, electron paramagnetic resonance spectra with $g=2{\cdot}03$ of animal liver - on exposure to butylhydroxytoluene and diethylnitrosamine 3, 524
Tissues, thermodynamics of the processes in plant - on cooling 6, 1129
α-Tocopherol, localization of - in chloroplasts 3, 363
Transcapillary filtration of a liquid modelled with concentrated parameters 1, 135
Transfer of protoplasm, wave regimes of the contractile activity of strands of the plasmodium of the myxomycetes *Physarum* and their link with - 1, 106
Transfer reactions, energy of re-organization of the medium in the charge - in the protein globule 1, 14
Transition, appearance of dissipative structures by the type of phase - of order I at degenerate bifurcations 4, 768

Transitional processes, changes in redox potential in - in pure and mixed cultures of *Escherichia coli* and *Serratia marcescens* 2, 325
Transitions, oscillations and trigger - in a stoichiometric model of the synthesis of fatty acids 6, 1024
Ca^{2+} Transport, effect of the external electrical field on - in the sarcoplasmic reticulum 3, 480
Transport, possible influence of the surface of ideally polarized metals on ion - in the cell membrane 4, 754
Transport of a liquid, mathematical model on the - in the convoluted proximal renal tubule and the surrounding capillaries 4, 741
Transport of cations, model of non-electrogenic - across bilayer lipid membranes 2, 255
Transport of Na^+ ions, effect of low intensity continuous millimetre radiation on the - in the frog skin 3, 527
Transport of water, use of paramagnetic ions in studies of intercellular - by the n.m.r. method with a pulsed magnetic field gradient 1, 92
Tricarboxylic acid cycle, substrate depression in the - 6, 1039
Trigger transitions, oscillations and - in a stoichiometric model of the synthesis of fatty acids 6, 1024
Triplet probe method, study of the localization of the quinone ring of ubiquinone Q-10 in dipalmitoyl phosphatidylcholine liposomes by the - 5, 851
Tumour bearing animals, system of regulating lipid oxidation and the structural state of the nuclear membrane after the action of irradiation on - 1, 53
Tumour tissue, use of the fusion method to detect differences between DNA of normal and - 2, 346

Ubiquinone, reversibility of inhibition by phenanthroline of electron transport in the chromatophores of the non-sulphur purple bacteria on exposure to - and alpha-tocopherol 3, 548
Ubiquinone Q - 10, study of the localization of the quinone ring of - in dipalmitoyl phosphatidylcholine liposomes by the triplet probe method 5, 851
U.h.f. dielectrometry, hydrate surroundings of the macromolecules of biopolymers as shown by - 6, 1019
U.h.f. irradiation, mechanism of the change in electrophoretic mobility of erythrocytes on - 5, 930
Ultravioletv radiation, change in aggregation of erythrocytes and thrombocytes in response to - 1, 97
Ultraviolet radiation, dependence of the photodamage to erythrocytes on the intensity of - 1, 169
Ultraviolet region, spectral studies of chromatin and its components in the vacuum - of the spectrum 6, 1047
Unicellular flagellate alga, influence of light and electrical current on pulses of periodic activity in the - 5, 919
Unicellular flagellate alga, periodic electrical activity in a - and its possible link with linophotokinesis 4, 704
Urea solutions, Conformation and thermal stability of DNA in aqueous - 3, 410

Vanadate, interaction of - with the contractile system of the rabbit psoas muscle in the active, relaxed and rigor states 2, 309
Van t'Hoff equation, applicability of thermodynamic analysis of the thermal denaturing of complex proteins on the basis of the - 1, 44

Venom, study of the channel-forming properties of the - of the spider *Steatoda paykulliana* 4, 680
Vaciscular membranes, electrostriction of - 3, 476
Visco-elastic properties, change in the electrical and - of bilayer lipid membranes on interaction with proteins and lipoproteins 3, 459
Voltage of the membrane, general scheme for calculating the fluctuations in current and - in stable and metastable states 1, 75

Water, isotope fractionation on movement of - in the xylem of higher plants 6, 1134
Water, model description of the process of release of - from plant cells on cooling 1, 112
Water permeability, effective - of a complex of membrane structures of plant cells at subzero temperatures 5, 943
Wave nature of the central process of formation of the trajectories of change in the joint angle in man 1, 130
Wave regimes of the contractile activity of strands of the plasmodium of the myxomycetes *Physarum* and their link with transfer of protoplasm 1, 106
Whale metmyoglobin, special aspects of the melting of crystals of - 1, 165
Wheat grains, hydration as a parameter for determining variety differences of - 4, 758
Wheat seedlings, change in the e.s.r. signals I and II during development of the photosynthetic apparatus of - in light of different spectral composition 4, 722
Wiping reflex cycle, biomechanical aspects of the - 3, 530

X-ray diffraction, comparative study of the proteins of the bovine crystalline lens in native tissue and in an extract by - 6, 1123
X-ray diffraction on the intact isolated frog crystalline lens 5, 953
X-ray scatter, rotary isomerization of the side groups of globular proteins and its influence on the indicatrix of - of proteins in solutions 3, 569
X-ray study, use of synchrotron radiation for the - of the dynamics of structural changes of collagen on dehydration 2, 350
Xylem, isotope fractionation on movement of water in the - of higher plants 6, 1134

Yersinia pseudotuberculosis, sedimentation properties of lipopolysaccharide protein complex of - 6, 1029

Zooplankton, fluctuations in natural electromagnetic fields and rhythm of diurnal vertical migrations of - 6, 1116
